Disaster Preparedness Quiz

Are you Prepared? Find out by taking our quiz:

Imagine that a police officer knocks at your door. A hurricane is quickly approaching and you have 45 minutes to evacuate.

If You Have Pets:

- 1. Can you gather all your pets and put them into carriers in time? Do you have carriers for all your pets?
- 2. Are all your pets wearing collars with a current rabies tag and ID tag with their name, your name, your telephone number, and an emergency telephone number?
- 3. If your pet escapes the carrier and becomes lost, could you provide a photograph?
- 4. Do you know where you can go with your pets in the event of an emergency evacuation? Do you know of any pet-friendly motels nearby?
- 5. Do you have your veterinarian's telephone number or your list of emergency numbers, in case your dog or cat becomes ill?

If You Have Horses:

- 1. Can you have your horses loaded on the trailer ready to leave in time? Will your horse trailer hold all your horses?
- 2. Is your horse wearing a halter with her name, your name, your telephone number, and an emergency telephone number on it?
- 3. Do you know where you can go with your horses in the event of an emergency evacuation? Do you know where your local emergency equine shelter is located?
- 4. Do you have your horses' Coggins tests in your emergency packet to present to the

officer at the emergency shelter?

- 5. When you arrive at the emergency shelter to pick up your horse after several days, could you provide identification photos and descriptions from your emergency packet to prove ownership?
- If You Have Farm Animals:
- 1. Can you evacuate your animals in time?
- 2. Have you mapped out an evacuation route (and an alternate route if necessary)?
- 3. Do you have a safe place to shelter your animals on your property, if you cannot evacuate them?
- 4. Do you have materials on hand to reinforce your barn and outbuildings?
- 5. Do you have a backup plan for feeding and watering your animals should your power be cutoff?

For more information regarding Disaster Preparedness, log on to <u>www.hsus.org</u>

<u>Create A Family Disaster Plan</u>

Discuss types of disasters that are most likely to happen in your community or region

Discuss what to do if you need to evacuate:

- X Where will you go?
- X How will you get there?
- X What is an alternate route, in the event that the original route is inaccessible?
- X What might you take with you?

Pick 2 places to meet

- X Right outside your home in a pre-designated spot, in case of a sudden home emergency (such as a fire)
- X Outside of your neighborhood, in case you can't return home

Ask an out of state friend/relative to be your "emergency family contact"

- X After a disaster it is often easier to call long distance.
- X In case of separation, other family members should call this person and tell them where they are.
- X Be sure that everyone in your family knows the "emergency family contact" and their address and contact numbers.

Assemble a family disaster supplies kit

Assemble a pet disaster or evacuation kit

Take pictures or videos of the contents of your home for insurance purposes. Store the video or pictures with a friend/family member or in a safe place away from the home

Make photocopies of important papers and store safely or take with you in plastic waterproof ziplock type bags: * auto registration * insurance policies personal and home * insurance agents' name and telephone numbers * last bank statement * last credit card statements * social security card *contracts * deeds * wills * birth certificates * marriage certificate * immunization records * military records * passport * investment and retirement papers, etc.

- ~ Flashlight
- Extra Batteries for each battery powered piece of equipment
- Battery operated radio and/or weather alert radio
- Chlorine bleach (not containing any soap or fragrances) and an eyedropper (to measure bleach) - * label should show ONLY hypochlorite as the active ingredient
- ~ 1 blanket or sleeping bag per person
- ~ 3 day supply of water (1 gallon per person per day)
- Food that won't spoil (canned foods, juices, quick energy snacks, dried fruits and/or meats) - ** include a manual can opener
- ~ One change of clothing and footwear per person
- ~ First aid kit
- Prescription medicine (2 week supply)
- ~ Extra pair of glasses
- ~ Sanitation supplies for an emergency toilet
- ~ Fire extinguisher
- ~ Non-electrical basic princess style telephone (may work without electricity)
- ~ Duct tape
- Personal hygiene items
- Moist towelettes waterless cleansers
- List of important emergency contacts (doctor, dentist, close friends or relatives)
- ~ Wet wash cloth to clean teeth, wash face and body
- Spray bottle to use as a makeshift shower
- Cash and Credit Cards
- ~ Extra set of car keys
- ~ Signal flare

Disaster Preparedness for Pets

information taken from <u>www.hsus.org</u>

<u>When disaster strikes, always keep your pets with you.</u> <u>If it isn't safe for you to stay put, it isn't safe for your pets.</u>

Hurricanes, floods, wildfires, hazardous materials spills - disasters can strike anytime, anywhere. If you think you will never have to evacuate unless you live in a flood plain, near an earthquake fault line or in a coastal area, you may be tragically mistaken. It is imperative that you make preparations to evacuate your family and your pets in any situation. In the event of a disaster, proper preparation will pay off with the safety of your family and pets.

If you evacuate, Take your Pets

The single most important thing you can do to protect your pets is to take them with you when you evacuate. Animals left behind in a disaster can easily be injured, lost or killed. Animals left inside your home can escape through storm damaged areas, such as broken windows. Animals turned loose to fend for themselves are likely to become victims of exposure, starvation, predators, contaminated food or water, or accidents. Leaving dogs tied or chained outside in a disaster is a death sentence.

- X If you leave, even if you think that you may be gone only for a few hours, take your animals. Once you leave, you have no way of knowing how long you'll be kept out of the area, and you may not be able to go back for your pets.
- X Leave early don't wait for a mandatory evacuation order. An unnecessary trip is far better than waiting too long to leave safely with your pets. If you want to be evacuated by emergency officials, you may be told to leave your pets behind.

Find a Safe Place Ahead of Time

Because evacuation shelters generally don't accept pets (except for service animals), you must plan ahead to ensure that your family and pets will have a safe place to stay. Don't wait until disaster strikes to do your research.

X Contact hotels and motels outside your immediate area to check policies on accepting pets. Ask about any restrictions on number, size, and species. Ask if "no pet" policies will be waived in an emergency. Make a list of pet-friendly places and keep it handy. Call ahead for a reservation as soon as you think

you might have to leave your home.

- X Check with friends, family, or others outside your immediate area. Ask if they would be able to shelter you and your animals or just your animals, if necessary. If you have more than one pet, you might have to be prepared to house them separately.
- X Make a list of boarding facilities and veterinary offices that might be able to shelter animals in emergencies; include 24-hour telephone numbers.
- X Ask your local animal shelter if it provides foster care or shelter for pets in an emergency. This should be your last resort, as shelters have limited resources and are likely to be stretched to their limits during an emergency.

As the Disaster Approaches

Don't wait until the last minute to get ready. Warnings of hurricanes or other disasters may be issued hours, or even days, in advance.

- X Call to confirm emergency shelter arrangements for you and your pet(s).
- X Bring pets into the house and confine them so you can leave with them quickly if necessary. Make sure each pet and pet carrier has up-to-date identification and contact information. Include information about your temporary shelter location.

Make sure your disaster supplies are ready to go, including your pet disaster kit.

After the Storm

Planning and preparation will help you weather the disaster, but your home may be a very different place afterward, whether you have taken shelter at home or elsewhere.

X Don't let pets roam loose. Familiar landmarks and smells might be gone, and your pet will probably be disoriented. Pets can easily get lost in such situations.

- X For a few days, keep dogs on leashes and keep cats in carriers inside the house. If your house is damaged, they could escape and become lost.
- X Be patient with your pets after a disaster. Try to get them back into their normal routines as soon as possible, and be ready for behavioral problems that may result from the stress of the situation. If behavioral problems, persist, or if your pet seems to be having any health problems, talk to your veterinarian.

Evacuation Planning:

You may not be in a flood zone or have to evacuate, but even a hazardous material incident on a nearby street could force you to evacuate.

It pays to be prepared!

🖮 🧃 Small Animal Evacuation Kit

2 week supply of food (dry or canned) per animal *if food is in cans don't forget a manual can opener. Always have a reserve supply of the type of food your pet is used to eating. If your pet eats canned food, buy cans small enough to be used at one feeding since you may not have a way to properly refrigerate any leftover food. Store food in an airtight, waterproof container and rotate food at least every three months. Record the diet for each animal, including what NOT TO FEED in case of allergies.
Food and water dish - plus 1 extra, in case one is lost or misplaced
Spoon or scoop to measure and/or mix food
2 week supply of water per animal A 10 lb animal drinks 1 pint (16 fluid ounces) of water per day A 20 lb animal drinks 1 quart of water per day A 50 lb animal drinks $\frac{1}{2}$ gallon of water per day 1 carrier/cage per animal, labeled with emergency
contact information.
The crate must be large enough for your pet to stand up, turn around and lie down comfortably and allow room for a food and water dish (and litter pan if applicable)A proper fitting collar or harness and identification
tags should be kept on each pet at ALL times - and a
sturdy 6 foot long leash for each dog should be
readily accessible.
This is a stressful time for animals and a frightened dog can slip out of a collar, but not a harness. If you don't want to use a harness, along with the sturdy leash, you should have a slip lead that goes around the pet's neck. Again, this reduces the chances of a pet slipping his/her collar.
Spare identification tag that you can write on. If you are
going to be living somewhere temporarily you can put the address and telephone number of that location on each pet's tag or the contact information of a close friend or relative that would take responsibility for your pet(s) if necessary.
2 week supply of medications - list each animal separately along
with the name of that pet's medication, the dose and frequency given. Provide veterinary hospital and pharmacy telephone numbers for refills.
Pet first aid kit (to be covered during first aid training portion)
Cat litter, liners and litter pan, if applicable
Plastic bags to handle waste

 Cleaning supplies, paper towels, soap (for food and
water bowl) and disinfectant (cleaning carrier/crate)
Muzzle, if necessary
 Proof of pet ownership - current pictures (with and without family members in the photo for proof of guardianship), copies of adoption papers, registration papers, proof of purchase, microchip/tattoo numbers and registry phone numbers. List each of your animals indicating their species/breed, age, sex, whether neutered/spayed, color and any distinguishing characteristics.
 Veterinary records - vaccination history (types of vaccines and dates given) - current rabies certificate - important test results (FeLV, FIV, Heartworm) List any current or previous medical conditions
 Lost animal posters with emergency contact
information and the pet's picture - just in case a pet escapes and you have no way to print up flyers
 List of important emergency contacts and telephone
numbers
1. Numbers where you can be reached (pager, cell phone number)
2. Your prearranged evacuation site
3. Local contact person in case of emergency when you are not
available - who will take responsibility for your animal(s)
Out-of-state contact person in case of emergency when you are
not available - who will take responsibility for your animal(s)
5. Your veterinarian
6. Local Animal Control/Services
7. Local animal shelter / humane society / SPCA
8. Local police department
9. Local fire department 10 Local Red Cross chapter
10 Local Red Cross chapter 11. United States Department of Agriculture Missing Pet Network
These contact numbers can be used by rescue personnel responding to a disaster
affecting your animals, a neighbor or pet sitter or by you during a disaster or an

affecting your animals, a neighbor or pet sitter or by you during a disaster or an evacuation. Keep one copy near your telephone and one copy in your animal evacuation kit. Indicate the number of animals that need to be rescued that live in your home and their favorite hiding spots. Instruct where to go to access capture or restraint equipment, and the location of animal carriers/crates.

Alternate Plans in Case of a Disaster

What happens if you can't get home?

- 1. Keep current identification information on all of your pets, <u>even if they</u> <u>are totally indoors</u>
- 2. Leave extra water <u>water is more essential than food</u>
- 3. Leave an extra bowl; consider an automatic waterer and don't close the toilet lid
- 4. Put a notice on entry doors and windows letting rescue personnel know that there are pets inside your home. Keep this information current!
- 5. Make arrangements with a neighbor, friend, or pet sitter that:
 - \mathcal{J} knows the animal(s) and feels comfortable with them
 - \$\$ knows where your disaster supply kit is kept
 - \int has a key to your house
 - \int knows how to contact you or your emergency contact

What if there is an immediate emergency with little to no warning (such as a fire or event that causes you to suddenly evacuate)?

PRACTICE DRILLS ARE ESSENTIAL

- 1. Practice exiting your home blindfolded
- 2. Place a pair of shoes and a flashlight under your bed, so that they are readily available during an emergency
- 3. Practice gathering all your family members, animals, and emergency supplies and exiting the house with your animals secured (in carriers, crates, or even pillowcases as cat bags)
- 4. Consider taking a CPR class and First Aid class contact your local American Red Cross chapter for course schedule

** <u>These drills should be done more than once - the goal is to become</u> <u>more proficient and save time with each practice drill.</u>

Facts About Water

Water is the single most abundant substance in the human body, making up to 60% of an adult's weight, up to 80% of an infant's weight, and 60% of your pet's weight. A person can live several days without food, but just a few days without water. It is second only to air in importance to life.

Because water is so important to human survival, NEVER RATION IT. Drink at least 2 liters per day, as long as supplies last, and look for alternative sources.

Water Sources

<u>In the home:</u>

- Melt ice cubes
- Electric Hot Water Tank turn off the power that heats it, and let the tank cool down. Then place a container underneath and open the drain value at the bottom of the tank. Don't turn the tank on again until water services are restored.
- Toilet Tank the water in the tank (not the bowl) is safe to drink unless chemical treatments have been added.
- Water Pipes release air pressure into the plumbing system by turning on the highest faucet in the house. Then drain the water from the lowest faucet.
- Water Beds avoid water from water beds as a source for drinking water. Pesticidal chemicals are in the plastic casing of the bed and chemicals have probably been added to the water to prevent the growth of algae, fungi, and bacteria. This water is only safe for hand-washing and laundering.

Outside the home:

Rain water, spring water and water from streams, rivers, lakes, and coiled garden hoses can be used after it is purified. Avoid water with floating material, an odor or a dark color. Non-sterilized water may be contaminated with the parasite Giardia.

Purifying Water

- X Heat Sterilization: Boiling water is the preferred method of purification because disease-causing microorganisms cannot survive the intense heat. Bring water to a rolling boil for 10 minutes. Pour the water back and forth from one clean container to another to improve the taste. Adding a pinch of salt could also help.
- X Chemical Sterilization: In some situations, boiling water may not be an option. The alternative is to treat the water chemically. Plain household chlorine bleach may be used. Be sure the label states that hypochlorite is the <u>only</u> active ingredient. Bleach containing soap or fragrances is NOT acceptable. With an eye dropper, add 8 drops of bleach per liter of water (16 drops if the water is cloudy), stir and let stand. After 30 minutes the water should taste and smell of chlorine. At this time it can be used. If the taste and smell (and appearance in the case of cloudy water) has not changed, add another dose and let stand. If after 1 hour the water does not have a chlorine smell, do not use it.
- X Purification Tablets: Purification tablets release chlorine or iodine. They are inexpensive and available at most sporting goods stores and some drugstores.
 Follow the package directions. Usually one tablet is enough for 1 quart of water.
 Double the dose for cloudy water.

Water is essential to Life

Be Prepared to Have Adequate Supplies of Water Available at <u>ALL</u> times!

Food Safety

Severe storms often result in extended power losses and flooding. If you lose power for an extended period of time or your home has flooded, then you need to take the following precautions:

Refrigerated foods that have been kept at 45 degrees or colder for less than 8 to 12 hours without refrigeration should be used immediately or discarded. Refrigerated foods that have been above 45 degrees for more than two hours should be discarded.

Do not open freezers or refrigerators until you plan to use or discard the contents; most freezers will keep food safe for 36 to 48 hours if left closed.

If you have opened a freezer, and if the temperature of the food is above 45 degrees, use immediately or discard it.

Do not refreeze thawed foods.

Wash and sanitize (using a teaspoon of household bleach to one gallon of water) cans of food that have been exposed to flood waters.

If fresh fruits and vegetables or food in plastic, cardboard or paper containers have been in contact with floodwaters, do not eat them.

If you must discard food, try to bury it at least 48 inches deep. If burial is not possible, place the food in sealed plastic bags or containers for disposal in your local landfill.

Safe Drinking Water

If you rely on a public or private well for drinking water and it was flooded or you lost electricity, then you should boil your water for at least three minutes before drinking, cooking, making ice or brushing teeth.

Infants under six months and pregnant women should not drink boiled water, because boiling water may concentrate nitrates that could harm them. They should drink bottled water.

Customers of public water systems should contact their utility or operator for information on the water quality. Private well users should contact their county health department for advice.

If you have questions about food or drinking water safety, call your <u>local health</u> <u>department</u>.

How To Construct an Emergency Toilet

- X 5 gallon bucket with a tight fitting lid
- X heavy duty trash bags
- X cat litter or sawdust
- X cleanser with antibacterial properties
- X toilet paper

1. Line the inside of a toilet bowl, 5 gallon bucket or another appropriately sized waste container with 2 heavy duty plastic garbage bags.

2. Place kitty litter, or sawdust into the bottom of the bags.

3. At the end of each day, the bagged waste should be securely tied and removed to a protected location until a safe disposal option is available.

4. During a declared emergency, these bags may be included with the regular garbage if a public announcement has been made that allows this method of disposal.

Disinfectants for Human Waste Sanitation: The best choice is a solution of 1 part liquid chlorine bleach to 10 parts of water. Other commercial disinfectants include HTH or calcium hypochlorite, which is available at swimming pool supply stores; portable chemical toilets, which are available through recreational supply stores; and powdered chlorinated lime, which is available at building supply stores.
