Mites	HERBU
Dermatophagoides farinae dust mite	≤10 NEG
Dermatophagoides pteronyssinus dust mite	≤10 NEG
Tyrophagus storage mite	≤10 NEG
Acarus siro storage mite	≤10 NEG
Lepidoglyphus storage mite	≤10 NEG
Blomia tropicalis mite	≤10 NEG

Insects	HERBU
Flea	≤10 NEG
Cockroach Mix	≤10 NEG
Mosquito	≤10 NEG

Epithelials	HERBU
Cat	≤10 NEG
Feather Mix	≤10 NEG

Fungi	HERBU
Malassezia	≤10 NEG
Fusarium	≤10 NEG
Aspergillus	≤10 NEG
Penicillium	≤10 NEG
Cladosporium	≤10 NEG
Alternaria	≤10 NEG
Drechslera	≤10 NEG
Grain Smut Mix	≤10 NEG

HERBU		
≤10	Negative	No allergen-specific IgE detected.
11 to 25	+	Allergen-specific IgE detected. Allergens in this category should be considered for immunotherapy if exposure is consistent with patient history.
26 to 50	++	High levels of allergen-specific IgE detected. Allergens in this category should be considered for immunotherapy if exposure is consistent with patient history.
51 to >600	+++	Very high levels of allergen-specific IgE detected. Allergens in this category should be strongly considered for immunotherapy if exposure is consistent with patient history.

White Potato	≤10 NEG

HERBU		
≤10	Negative	No allergen-specific IgE detected.
≥11	Positive	Allergen-specific IgE detected.

Not all patients with adverse reactions to food have significant scores on serum IgE tests. The gold standard for determination of adverse reaction to foods is a compliant exclusionary diet trial followed by provocative re-challenge. A Heska Limited Antigen Diet Chart is available upon request.
